

Coal

**Need to evaluate strategy
in the coal industry?**

Coal

Coal markets are changing as emissions become more regulated, generation competition increases and opportunities emerge in liquid fuels. Understanding coal markets is no longer a simple problem and choosing the right strategies to pursue with coal assets has never been more important. To analyze coal opportunities, companies need to understand competition in electric, fuel, emissions and other markets. But these multi-market problems are complex and most companies do not have the capability to analyze them. MarketPoint provides an integrated modeling system that enables this capability for coal.

MarketPoint was established in 1996 to create a general purpose software platform for energy modeling. We analyze complex coal issues by using economic first principles and by integrating the analysis of coal, emissions, electricity and other fuels. We provide the software, data, training and support to enable your staff to develop strategy in coal. Contact us and ask to see our demonstration of integrated coal modeling.
