

Electricity

**Need to analyze
emissions strategies?**

Electricity

Emissions regulations are growing and affecting electricity markets in an unprecedented way. Companies have to plan now for announced and expected environmental regulations. Choosing the right strategy is perilous and the way to proceed is not always clear.

Companies need an assessment methodology to continuously evaluate and adjust their strategy as emissions regulations evolve. But most companies do not have analysis tools designed to model electric markets, retrofitting, fuels, emissions credits and other issues surrounding new regulations. MarketPoint provides a modeling system that addresses all of these needs. MarketPoint was established in 1996 to create a general purpose software platform for energy modeling. We specialize in forecasting electric markets based on economic first principles. We provide the software, data, training and support to enable your staff to develop strategy in the dynamic area of emissions. Contact us and ask to see our demonstration of integrated electric and emissions modeling.
